TOOLS RENTAL MANAGEMENT

User Manual

Renting tools out, taking them back, and knowing where every one of them is.

About This Guide

This guide covers the Tools Rental Management tablet app: signing in, renting tools out, taking them back, chasing the money, and reading the reports. It was written by working through the app screen by screen, so every button, message and field named here is the text you will actually see.

There are two books inside this one document. **Book One, Everyday Use**, is for the people who work the rental counter. **Book Two, Setting It Up**, is for whoever installs the app and decides what each person is allowed to see. If you rent tools to customers, Book One is the whole of your job. Book Two is a once-per-tablet exercise.

Each step tells you what to tap, what to type, and *why* it matters, because the app rarely explains itself. Where something behaves in a way that will surprise you, it is called out rather than glossed over. Screens the app registers but that you cannot reach are left out entirely.

IMPORTANT *Your company sets the icon caption on the tablet's home screen and the logo strip across the top of the app, so both may read differently on your device. Wherever this guide says "the logo strip", look at the band at the very top of the screen.*

Tools Rental Management at a Glance

A normal day runs in one direction, and the app is built around that direction:

- Sign in, and pick the branch you are standing in. You cannot change branch later without signing out.
- A customer arrives. You start a **New Rental**, find them by name or create them on the spot, and add the tools they want.
- You tap **Confirm**, then **Check-Out Tools**: you record the condition of every tool, photograph it, take any advance payment, capture the customer's ID and their signature, and they leave with the tools.
- The tools come back. You tap **Check-In Tools**, record the condition they came back in, add late fees or damage charges if there are any, take the balance, and collect two signatures.
- You rate the customer, mark the order **Done**, and produce the invoice.
- Somewhere in the day you record fuel, repairs and other **Expenses**, and glance at the **Sales Report** or the **Rental Dashboard** to see how the month is going.
- You sign out. The next person signs in as themselves.

Everything else in the app supports that loop: the tool catalogue, the pricing rules, the customer records and the reports.

BOOK ONE

For everyone who works the rental counter.

What Is In This Book

Part	What it covers
Part 1	Signing in and choosing your branch
Part 2	Finding your way around the home screen
Part 3	Renting tools out, from a blank order to tools leaving the counter
Part 4	Taking tools back, including partial returns
Part 5	Discounts, tax and invoices
Part 6	The tool catalogue and its prices
Part 7	Customers, their ID proofs and their ratings
Part 8	Recording expenses
Part 9	The five reports
Part 10	Signing out, plus a quick reference and the things worth remembering

PART 1 SIGNING IN

Step 1 Open the App

Tap the Tools Rental Management icon on your tablet's home screen. You will see a blank white screen for a moment while the app loads its fonts, then the splash screen with your company logo.

The app decides where to send you. If the tablet has never been set up, you land on **Device Setup** and you need whoever administers your system — see Book Two. If you were already signed in, you go straight to the home screen. Otherwise you get the sign-in screen.

TIP *The blank white screen before the splash is normal and lasts a second or two. It is not a crash.*

Step 2 Sign In

Type your user name or email address, then your password. The eye icon at the right of the password box shows what you have typed, which is worth using on a tablet keyboard. Then tap **Login**.

Auto Fill Credentials fills both boxes from the last sign-in saved on that tablet. If nothing has been saved yet you get *"No saved credentials yet"* and the switch flips itself back off.

If you leave a box empty the app tells you *"Please input user name"* or *"Please input password"* under the offending field and shakes it. If the password is wrong you get *"Invalid username or password"*.

What you see	What to put in it	What it actually means
Username or Email	Your user name, or the email address on your user record	This is the account the whole day is recorded against. Orders you create are stamped with it.
Password	Your password	There is no <i>"forgot password"</i> link in the app. Only your administrator can reset it.
Auto Fill Credentials	Leave off on a shared tablet	On when you want the tablet to remember one person's sign-in. On a shared counter tablet this hands the next person your account.
Login	Tap once	Signs you in. If you belong to more than one branch, the branch list appears next.

The sign-in screen. Your company logo sits above it.

Step 3 Choose Your Branch

If your account covers more than one branch, a panel appears headed "Pick a branch to continue" with the line "Choose where you're working from today." Tap the branch you are standing in, then tap **Continue**. The button stays dimmed until you have picked one.

If your account covers only one branch, you never see this panel and go straight to the home screen.

This choice matters more than it looks. Every order, tool and customer you see from now on belongs to the branch you picked here.

IMPORTANT *There is no way to change branch inside the app. If you pick the wrong one, sign out from the **Logout** tab and sign in again. Choosing a branch also changes your default company in the back office, so tell your administrator if you pick one by accident.*

The branch panel, with no branch chosen yet so **Continue** is still dimmed.

PART 2 FINDING YOUR WAY AROUND

Step 4 Read the Home Screen

The home screen is a set of labelled bands, each holding square tiles. Under your company logo there is a picture banner, then today's date and the time, then a purple bar reading **Quick Access** with your branch name on the right.

Below that the tiles are grouped: **OPERATIONS, TOOLS DETAILS & PRICING, CUSTOMERS, REPORTING** and, for administrators only, **ADMINISTRATION**. The small number at the right of each band heading is how many tiles that band is showing you.

That count varies from person to person. Your administrator can hide individual tiles for individual people, and a band with nothing left in it disappears completely. If a colleague has a tile you do not, that is why — nothing is broken.

What you see	What it is for	What it actually means
The picture banner	Whatever your company puts there	Decoration only. The banners are not buttons and tapping one does nothing.
Quick Access bar	Shows the branch you signed in to	Worth a glance before you start an order, because it is the only place the branch is shown.
Band headings	Group the tiles by job	The number on the right counts only the tiles you can see, not the tiles that exist.

What you see	What it is for	What it actually means
New Rental and Rental Orders	The two tiles you will use all day	Everything in Part 3 and Part 4 starts at one of these.

The home screen, scrolled to the top.

Step 5 Use the Three Tabs

Along the bottom there are three tabs. **Home** brings you back to the tiles. **Profile** shows who you are signed in as, which database you are on, whether you are an administrator, and which branch you chose. **Logout** is not really a tab — tapping it asks "Are you sure you want to logout?" rather than taking you anywhere.

When you open a tile the tab bar disappears. Use the < arrow at the top left of the screen to come back.

On the home screen the tablet's own back gesture shows "Press back again to exit" the first time and closes the app the second time.

IMPORTANT While you are working, the app checks in with the server every few seconds. If your administrator blocks or disconnects this tablet, you are signed out immediately and returned to the setup screen from whatever screen you were on — including a half-finished order. Anything unsaved is lost.

PART 3 RENTING TOOLS OUT

Step 6 Open the Rental Orders List

Tap **Rental Orders** on the home screen. Every order for your branch is listed newest first, each card showing its reference, the customer, the dates, how many tools, and the total.

The row of pills across the top filters the list: **All**, **Draft**, **Confirmed**, **Checked Out**, **Checked In**, **Done**, **Invoiced**, **Paid** and **Unpaid**. The first seven filter on where the order has got to; **Paid** and **Unpaid** filter on whether the money has arrived.

An order that came back late carries a red **LATE RETURN** flag. Where an advance was taken, the card shows it under the totals, and says **Returned** if you have since given it back.

What you see	What it tells you	What it actually means
Status pill on the card	Where the order has got to	Checked Out means the customer has the tools right now.
Paid (0d credit)	Paid, on a credit method with no days outstanding	The wording comes from the payment method chosen at check-in.
The duration line	How long the rental runs	It always prints as day(s) , so a one-day hire reads "1 day(s)".
LATE RETURN	The tools came back after the planned date	Late fees are charged per tool during check-in, not automatically.

IMPORTANT This screen has no search box, only the filter pills, and it loads the most recent 200 orders. An older order cannot be found here — look it up in **Order Reports**, which does have a search box.

The rental orders list on the **All** filter.

Step 7 Start a New Order

Tap **New Rental** on the home screen, or the + at the top right of the rental orders list. Either way you get a blank order in **Draft**.

A strip across the top shows how far the order has got: **Draft**, then **Confirmed**, **Checked Out**, **Checked In**, **Invoiced**. A draft order is the only kind you can freely change. Once you confirm it, the customer, the dates and the tool lines are all locked.

What you see	What it is	What it actually means
The status strip	The order's progress	You can move forwards through it, never backwards. There is no way to un-confirm an order in the app.
Save Draft	Saves without confirming	Use it if a customer is still deciding. The order stays editable.
Confirm	Locks the order in	After this, only the check-out and check-in wizards can change anything.
Cancel	Abandons the order	Available until the order is invoiced or marked done.

A new rental order at Draft.

Step 8 Choose the Customer

Tap the **Customer** box — it is the one marked with a red asterisk — and start typing a name. Matching customers drop down beneath, each showing their phone number and email.

If the customer is new, keep typing and tap the create row that appears beneath the list, reading **+ Create New** followed by the name you typed. The app makes the customer record there and then and tells you "New customer created:" with the name.

Fill in **Phone** and **Email** if you have them. The country code button to the left of the phone number sets how many digits are expected, and the placeholder tells you the count, for example "Phone number (9 digits)".

What you see	What to put in it	What it actually means
Customer	The person renting the tools	Required. The order cannot be confirmed without one. Business accounts cannot be used here — only individual people.
Phone	Their mobile number	Must be exactly the number of digits the country code expects, or you get a message saying so. This is the number the invoice is sent to.
Email	Their email address	Must end in .com . Anything else is rejected, so an address ending in .om , .co.uk or .org cannot be

What you see	What to put in it	What it actually means
		entered.
Responsible	Nothing — it fills itself	Shows who is handling the order.

TIP The **Customers** screen has no "add customer" button. This box is the only place in the app where a customer can be created, which is why it also asks for the phone number and email.

Step 9 Add the Tools

Scroll to the tabs and stay on **Rental Lines**. Tap **+ Add a line**, then tap the **Tool** box on the new line and type to search. The dropdown shows each tool's serial number and daily price.

Set how the line is charged with the **Per** chips — **Daily**, **Weekly** or **Monthly** — and set the duration. The line works out its own total as you go, and the totals block at the bottom keeps a running **Subtotal** and **Total**.

Repeat for each tool. To remove a line, tap **Remove** at its top right.

What you see	What to put in it	What it actually means
Tool	The tool being hired	Only tools the branch has available appear. If the list is empty, everything of that type is already out.
Per	Daily , Weekly or Monthly	Changes which pricing rule applies. A month is always treated as 30 days.
Duration	How many days, weeks or months	Drives the line total and, later, how many days count as late.
Remove	Tap to delete the line	It goes immediately, with no confirmation.

TIP **+ Add a line** only appears once a customer name is in the box. If you cannot see it, you get the note "Please enter a customer name to add tools" instead.

Step 10 Confirm the Order

Tap **Confirm**. You will see "Confirming order..." and then "Order confirmed".

The server checks two things: that the order has at least one line, and that every tool on it is still available. If another counter has just hired out the same tool, confirmation is refused and you are told which one.

IMPORTANT If confirmation fails you get a message beginning "Confirm failed:", but the order on your screen still shows **Confirmed**. The server has it as a draft. If anything about a confirmation looks wrong, back out to the rental orders list and open the order again to see its real status.

Step 11 Check the Tools Out

Tap **Check-Out Tools**. This is the longest part of the job and the app will not let you finish it until every required piece is present.

Work down the panel. For each tool, tap a **Condition** chip — **Excellent**, **Good**, **Fair**, **Poor** or **Damaged** — and tap **Capture Tool Photo** to photograph it, tapping **Use Photo** to keep the shot. Then enter any **Advance Amount** and, if there is one, tap a payment method. Capture the customer's ID with **Camera** or **Attach**. Read the terms, tick the agreement box, tap the signature panel, take the customer's signature and tap **Save Signature**. Finally tap **Confirm Check-Out**.

What you see	What to put in it	What it actually means
Condition	The state of each tool as it leaves	Required on every tool. This is what a damage charge is argued against later, so be honest and be specific.
Capture Tool Photo	A photo of each tool	Your only evidence of how the tool looked when it left.
Advance Amount	Any deposit taken now	If you enter anything above zero, a payment method becomes required. Choosing Cash adds a cash-received box and works out the change.
ID PROOF - FRONT	A photo or file of the customer's ID	Required. Check-out cannot be completed without it. The back is optional.
The agreement tick box	Tick after the customer has read the terms	Required before the signature panel unlocks.
Confirm Check-Out	Tap when everything above is	Hands the tools over and moves

What you see	What to put in it	What it actually means
	done	the order to Checked Out .

IMPORTANT If you untick the agreement box after the customer has signed, the signature is deleted without warning and has to be taken again.

PART 4 TAKING TOOLS BACK

Step 12 Check the Tools In

Open the order and tap **Check-In Tools**. If the order was never actually checked out on the server you are told so and offered **Go to Check-Out** instead.

For each tool, tap a **Return Condition** chip and tap **Capture Check-In Photo**. If the tools are late, a red band appears reading "Late Return" and each tool gets a late fee worked out from its daily fee and the number of extra days. If a tool came back damaged, type what is wrong in **Damage Note** and put the charge in **Damage Charge**.

Check the payment summary, choose a payment method, take the customer's signature, type the name of the staff member handling the return in **Signer Name**, take their signature too, then tap **Confirm Check-In**.

What you see	What to put in it	What it actually means
Return Advance	Tick if you are giving the deposit back	The summary then shows the advance as returned rather than deducted.
Return Condition	The state each tool came back in	Required on every tool being returned.
Damage Note and Damage Charge	What is damaged, and what you are charging	The note is printed on the invoice, so write it for the customer to read.
PAYMENT METHOD	Cash, Card, Bank or Credit	Required. Credit records the money as still owed and the order shows as unpaid.
Signer Name	The staff member accepting the return	Required, and printed next to the second signature.

Step 13 Return Only Some Tools

If the customer brings back part of the hire, tap **Remove** on each tool they have not brought. You are asked to confirm, and a band then reads "*Partial Return*" with the number of tools left outstanding.

The confirm button changes to **Save Partial Return**. Tap it, and the order stays **Checked Out** with the remaining tools still on hire. You will also get a **Partial Return Invoice** button for the part that has come back.

What you see	What it does	What it actually means
Remove on a tool	Leaves that tool on hire	Only offered when the order has more than one tool.
Save Partial Return	Books in what has arrived	The order does not move to Checked In . Check the rest in when it arrives.
Partial Return Invoice	Invoices the returned part	Appears in the action row once a partial return exists.

Step 14 Rate the Customer

Right after a full check-in, a panel opens asking "*How was the customer's behavior?*" Tap one of **Perfect**, **Very Good**, **Good**, **Fair** or **Poor**, add a note if it is worth recording, and tap **Save**. **Skip** closes it without rating.

The rating is stored against the customer, not the order, and appears the next time they hire something.

IMPORTANT *You cannot mark an order **Done** until a rating exists. If you skip it, the app will send you back here when you try.*

Step 15 Close the Order and Take Payment

With the tools back, the action row shows **Mark Done**. Tap it and the order is closed.

Where money is still owed, the order carries an **Unpaid** badge with the days outstanding and a **Mark Paid** button. Tap it when the money arrives and you get "*Marked as Paid*".

If you try to close an order that is still unpaid on credit, the app warns you that the invoice will show as unpaid and asks whether to carry on.

PART 5 DISCOUNTS, TAX AND INVOICES

Step 16 Apply a Discount

Discounts can only be given while the order is **Checked Out**. Tap **Discount** and you get a two-page panel.

The first page records who authorised it: type the **Authorized Person Name**, take their signature, and photograph them with **Camera** or **Attach**. All three are required. Tap **Next**.

On the second page choose **Total Discount** to take an amount off the whole order, or **Per Product** to discount individual tools. Enter a percentage or a fixed amount, then tap **Apply Discount**.

What you see	What to put in it	What it actually means
Authorized Person Name	Whoever approved the discount	Required, and shown on the Discount Details report afterwards.
Total Discount or Per Product	How to split the discount	Per Product lets you discount one overpriced line without touching the rest.
Percentage or fixed amount	The discount itself	A discount larger than the amount owed is refused.
Remove Existing Discount	Cancels a discount already given	It goes immediately, with no confirmation and no undo.

Step 17 Apply Tax

Tap **Tax** while the order is **Checked Out**. Choose **Total Tax** for one rate across the order or **Per Product** to set a rate per tool, type the percentage, and tap **Apply Tax**.

IMPORTANT This panel checks nothing. A negative percentage, or one over 100, is accepted and applied. Read the **Total Tax** figure back before you tap **Apply Tax**.

Step 18 Produce an Invoice

Depending on where the order has got to, the action row offers **Checkout Invoice**, **Partial Return Invoice** or **Check-In Invoice**. Tap one and a panel opens showing the order, the customer and the number of tools.

Choose **A4** or **A5**, then tap **Download PDF** to save it, **Print** to send it to a printer, or **Send WhatsApp** to send it to the customer's phone number.

What you see	What it does	What it actually means
Checkout Invoice	Invoices the hire as it went out	Available from check-out onwards.
Check-In Invoice	Invoices the completed hire	Includes late fees and damage charges.
Send WhatsApp	Sends the PDF to the customer	Needs a phone number on the customer record, and needs the messaging service connected on the server. Without a number you get "No phone number found for this customer".
A4 / A5	Paper size	A5 suits a counter receipt printer; A4 suits filing.

IMPORTANT The company name, address and registration details printed at the top of the invoice come from the app itself, not from your company record. If they are wrong, your administrator has to have them corrected — see Book Two.

PART 6 TOOLS AND PRICING

Step 19 Browse Tools and Equipment

Tap **Tools & Equipment**. The header reads **All Tools** and every tool in the branch is shown as a card with its photo, code, price per day and status.

The chips filter by state: **All**, **Available**, **Rented**, **Maintenance** and **Retired**. The search box matches on name, code, serial number and barcode.

What you see	What it means	What it actually means
Available	Ready to hire	Safe to put on an order.
Rented filter chip	Currently out with a customer	The card for the same tool says Checked Out rather than Rented . Same thing, two names.
Maintenance	Being repaired	Cannot be added to an order.
The search box	Matches name, code, serial, barcode	It searches only the tools already loaded, so it will not find one that has not loaded yet.

The tool grid, opened from the home tile so the header reads **All Tools**.

Step 20 Add Tools to the Catalogue

Tap the + at the top right of the tool grid. The screen is headed **Generate Serialized Products** and it creates one entry per serial number, which is how a rental catalogue needs to work — each drill is tracked separately.

Add a photo, type the **Product Name**, set **Rental Price / Day** and **Late Fee / Day**, and tap a **Rental Category** chip. Then type one serial number per line in the serial box. A preview tells you how many will be created. Tap the generate button to finish.

To change an existing tool, tap its card instead. That opens the same screen with the full record — internal code, serial number, barcode, brand, model, location and description — and a **Save Tool** button.

What you see	What to put in it	What it actually means
Product Name	What the tool is called	Required. Keep names distinct: two tools with the same name can pick up each other's price.
Rental Price / Day	The daily hire rate	Sets the starting price. Fine-tune it later in Pricing Rules .
Late Fee / Day	Charged per extra day	Used automatically at check-in when the tools come back late.
Rental Category	Which group the tool belongs to	Required by the server. Categories are set up centrally and cannot be created here.

What you see	What to put in it	What it actually means
The serial box	One serial number per line	Duplicates are rejected. Each line becomes its own trackable item.

IMPORTANT Tools added here do not appear in the tool list straight away. The app creates them as products, and a job on the server turns them into rentable tools once a day. If a new tool is missing, that is why — check again the next day, or ask your administrator to run the job.

Step 21 Adjust a Pricing Rule

Tap **Pricing Rules** to see every rule as a table: product, category, units, period, price and late fee. The **Category** and **Period** dropdowns narrow the list and the search box matches product names.

Tap any row to edit it. You can change **Rental Price**, **Late Fee / Day** and **Notes**, then tap **Save Pricing Rule**.

What you see	What to put in it	What it actually means
Rental Price	The rate for this rule	Applies to every future order using this tool and period.
Late Fee / Day	The overdue rate	Charged per extra day at check-in.
Period column	Per Day, Per Week, Per Month or Per Fixed	Read-only here. A fixed-price rule reads Per Fixed , which is the app labelling a fixed price as if it were a period.

IMPORTANT Pricing rules can only be edited in the app, never created or deleted, and only rules marked as the primary rule on the server appear at all. New pricing has to be set up in the back office.

The screenshot shows a mobile app interface titled "Pricing Rules". At the top, there is a search bar labeled "Search products..." and a filter dropdown set to "All Categories". Below this is a table with columns: #, PRODUCT, CATEGORY, UNITS, PRICE, and LATE FEE. The table lists 22 items, each with a unique ID, a name, a category, a unit count, a price, and a late fee. The items are: 1. A (General, 1 unit, £2,000), 2. Communication (Expenses, 1 unit, £1,000), 3. Discount (Services, 1 unit, £0,000), 4. Down Payment (POS) (Services, 1 unit, £0,000), 5. Drill (Hand Tools, 1 unit, £149,000), 6. Driller (Hand Tools, 1 unit, £181,000), 7. Expenses (Expenses, 1 unit, £1,000), 8. Gifts (Expenses, 1 unit, £1,000), 9. H (Goods, 1 unit, £1,000), 10. Helco (General, 1 unit, £1,000), 11. Ice (General, 1 unit, £2,000), 12. LED 15.5 (Goods, 1 unit, £110,000), 13. Mails (Expenses, 1 unit, £1,000), 14. Message (Expenses, 1 unit, £1,000), 15. Paint (General, 1 unit, £1,000), 16. Parker (General, 1 unit, £188,000), 17. Pencil (General, 1 unit, £1,000), 18. Repair Service (Services, 1 unit, £10,000), 19. Shirt (General, 1 unit, £2,000), 20. Travel & Accommodation (Expenses, 1 unit, £1,000), 21. U (General, 1 unit, £3,000), and 22. V (Goods, 1 unit, £1,000).

#	PRODUCT	CATEGORY	UNITS	PRICE	LATE FEE
1	A	General	1	£2,000	—
2	Communication	Expenses	1	£1,000	—
3	Discount	Services	1	£0,000	—
4	Down Payment (POS)	Services	1	£0,000	—
5	Drill	Hand Tools	1	£149,000	£1,100,000
6	Driller	Hand Tools	1	£181,000	£1,100,000
7	Expenses	Expenses	1	£1,000	—
8	Gifts	Expenses	1	£1,000	—
9	H	Goods	1	£1,000	—
10	Helco	General	1	£1,000	—
11	Ice	General	1	£2,000	—
12	LED 15.5	Goods	1	£110,000	—
13	Mails	Expenses	1	£1,000	—
14	Message	Expenses	1	£1,000	—
15	Paint	General	1	£1,000	—
16	Parker	General	1	£188,000	—
17	Pencil	General	1	£1,000	—
18	Repair Service	Services	1	£10,000	—
19	Shirt	General	1	£2,000	—
20	Travel & Accommodation	Expenses	1	£1,000	—
21	U	General	1	£3,000	—
22	V	Goods	1	£1,000	—

The pricing rules table.

Step 22 Browse Tool Categories

Tap **Tool Categories** for the list of groups — each with its short code, its description and a live count of how many tools are in it. Tap a category to see just those tools.

This screen is read-only. Categories are created and renamed on the server.

The screenshot shows a mobile app interface titled "Tool Categories". It displays a list of categories, each with a short code, a description, and a live tool count. The categories are: CLN (Cleaning Equipment, 0 Tools), EXPE (Expenses, 6 Tools), GENE (General, 12 Tools), GOOD (Goods, 3 Tools), HND (Hand Tools, 9 Tools), SFT (Safety Equipment, 0 Tools), and SER (Services, 3 Tools).

Short Code	Description	Tool Count
CLN	Cleaning Equipment	0 Tools
EXPE	Expenses	6 Tools
GENE	General	12 Tools
GOOD	Goods	3 Tools
HND	Hand Tools	9 Tools
SFT	Safety Equipment	0 Tools
SER	Services	3 Tools

The category list with its live tool counts.

Step 23 Run the Tool Availability Report

Tap **Tool Availability** for a stock-take: how many tools you have, how many are free, how many are out, and what they have earned.

Filter with the **Status** and **Category** dropdowns and the search box, then tap **Download Excel** or **Download PDF**. You choose a folder and the app confirms with "Saved" and the file name.

What you see	What it counts	What it actually means
TOTAL TOOLS	Everything in the catalogue	Includes retired tools, so it will exceed what you can hire out.
AVAILABLE / CHECKED OUT	Free versus out with customers	The quickest answer to "can we take this booking".
TOTAL REVENUE	What the tools have earned	Over the whole life of the tools, not the current period.
Status column	Avail, Rented, Maint, Retired	Shortened in the table. The downloaded file spells them out in full.

The screenshot displays the 'Tool Availability Report' screen. At the top, there are four summary cards: 'Total Tools' (33), 'Available' (30), 'Checked Out' (3), and 'Total Revenue' (€22440.850). Below these is a search bar and two buttons: 'Download Excel' and 'Download PDF'. The main part of the screen is a table with columns: 'Tool Name', 'Category', 'Status', 'Qty', 'Avail', 'Rented', 'Maint', 'Retired', 'Life', and 'Revenue'. The table lists various tools such as 'A General', 'B Communication', 'C Drilling', 'D Saw', 'E Drill', 'F Drill', 'G Drill', 'H Drill', 'I Drill', 'J Drill', 'K Drill', 'L Drill', 'M Drill', 'N Drill', 'O Drill', 'P Drill', 'Q Drill', 'R Drill', 'S Drill', 'T Drill', 'U Drill', 'V Drill', 'W Drill', 'X Drill', 'Y Drill', 'Z Drill', 'AA Drill', 'AB Drill', 'AC Drill', 'AD Drill', 'AE Drill', 'AF Drill', 'AG Drill', 'AH Drill', 'AI Drill', 'AJ Drill', 'AK Drill', 'AL Drill', 'AM Drill', 'AN Drill', 'AO Drill', 'AP Drill', 'AQ Drill', 'AR Drill', 'AS Drill', 'AT Drill', 'AU Drill', 'AV Drill', 'AW Drill', 'AX Drill', 'AY Drill', 'AZ Drill', 'BA Drill', 'BB Drill', 'BC Drill', 'BD Drill', 'BE Drill', 'BF Drill', 'BG Drill', 'BH Drill', 'BI Drill', 'BJ Drill', 'BK Drill', 'BL Drill', 'BM Drill', 'BN Drill', 'BO Drill', 'BP Drill', 'BQ Drill', 'BR Drill', 'BS Drill', 'BT Drill', 'BU Drill', 'BV Drill', 'BW Drill', 'BX Drill', 'BY Drill', 'BZ Drill', 'CA Drill', 'CB Drill', 'CC Drill', 'CD Drill', 'CE Drill', 'CF Drill', 'CG Drill', 'CH Drill', 'CI Drill', 'CJ Drill', 'CK Drill', 'CL Drill', 'CM Drill', 'CN Drill', 'CO Drill', 'CP Drill', 'CQ Drill', 'CR Drill', 'CS Drill', 'CT Drill', 'CU Drill', 'CV Drill', 'CW Drill', 'CX Drill', 'CY Drill', 'CZ Drill', 'DA Drill', 'DB Drill', 'DC Drill', 'DD Drill', 'DE Drill', 'DF Drill', 'DG Drill', 'DH Drill', 'DI Drill', 'DJ 'ZP Drill', 'ZQ Drill', 'ZR Drill', 'ZS Drill', 'ZT Drill', 'ZU Drill', 'ZV Drill', 'ZW Drill', 'ZX Drill', 'ZY Drill', 'ZZ Drill'.

The tool availability report.

PART 7 CUSTOMERS

Step 24 Find and Edit a Customer

Tap **Customers** and search by name, code, phone or email. Each row shows the customer, how many rentals they have had and what they have spent.

Tap a row to open **Edit Customer**, where you can correct the **Name**, **Phone** and **Email**, and capture their ID proofs. Tap **Save** when you are done.

What you see	What to put in it	What it actually means
Name	The customer's name	Required. Save stays dimmed while it is empty.
Phone	Their number, with the country code button at the left	Must match the digit count for that country.
ID Proof - Front and Back	Photographs of their ID	Captured here or during check-out. Remove deletes one immediately, with no confirmation.
Delete Customer	Removes the customer	Deletes their rental orders and their posted invoices as well. It cannot be undone.

IMPORTANT *There is no button to add a customer here. New customers are created inside a rental order — see Step 8. The list also loads only the most recent 200 customers, and the search looks through those, so an older customer may not appear.*

The customer list.

Step 25 Check ID Proofs

The **Customer ID Proofs** tile opens the same list, filtered to customers who have an ID on file, with the header **Customer ID Proofs**. Use it before handing over anything expensive to a customer you do not know.

Tap a row to open the same **Edit Customer** panel and view or replace the images.

The **Edit Customer** panel opened from the ID proofs list.

Step 26 Review Customer Ratings

The **Customer Ratings** tile opens the list filtered to customers who have been rated, showing each rating as a coloured badge with the notes underneath. Tapping a row here opens a read-only summary rather than the edit panel.

This is worth thirty seconds before you hand over an expensive tool to someone who has had it before.

The ratings list.

PART 8 EXPENSES

Step 27 Record an Expense

Tap **Expenses**, then **+ New**. Type a **Description**, set the **Expense Date**, choose a **Category**, and enter the **Quantity** and **Unit Price**. The total works itself out. Attach the receipt with **Camera** or **File**, then tap **Save**.

The pills across the top of the list filter by period — **Today**, **Week**, **Month**, **Year**, **All** — and the list opens on **Month**. The card above shows the totals for whatever period you have chosen.

What you see	What to put in it	What it actually means
Description	What the money went on	Required, and it becomes the title of the expense.
Expense Date	The date, as YYYY-MM-DD	Typed, not picked from a calendar.
Category	Fuel, repair, transport and so on	Required. The list is set up on the server.
Quantity and Unit Price	How many, and how much each	The two multiplied must come to more than zero or the expense cannot be submitted.
Split Expense	Divides one expense into equal parts	Between 2 and 20. Useful for a fuel bill covering several jobs. Save the expense first.

The expense list on its default **Month** period.

Step 28 Move an Expense Through Approval

An expense moves **Draft**, **Submitted**, **Approved**, **Paid**, shown as a strip across the top of the form. A refused expense gets a separate **Refused** marker.

Tap **Submit** to send a draft for approval. Whoever approves it taps **Approve** or **Refuse**. Once approved, **Mark as Paid** closes it. **Reset to Draft** sends it back to the start.

You can only edit an expense while it is in **Draft**. After that the fields are read-only.

What you see	When it appears	What it actually means
Submit	On a draft	Sends it for approval. Save the expense first or you are told to.
Approve / Refuse	On a submitted expense	Whether these do anything for you depends on your permissions on the server.
Mark as Paid	On an approved expense	The state shown as Paid in the list.
Delete Expense	On anything not yet paid	Asks "Are you sure? This cannot be undone."

PART 9 REPORTS

Step 29 Sales Report

Tap **Sales Report** for the money view: revenue, order count, average order value, tax collected, damage charges, late fees, discounts given and net revenue.

Choose a period with the pills — **Today**, **This Week**, **This Month**, **This Year** or **All Time** — or set your own dates in the **Custom** boxes. The payment pills narrow it to cash, card, bank or credit. **Customers Ranked** and **Tools Ranked** show who and what earns most. **Full PDF** and **Full Excel** download the lot.

IMPORTANT This report counts only orders that have been checked in or invoiced. Orders still out with customers, and anything still in draft, are left out with nothing on screen to say so. A quiet-looking month may simply mean tools have not come back yet.

The sales report on **All Time**.

Step 30 Order Reports

Tap **Order Reports** for the order-by-order view, with a search box that matches customer ID, order reference, name and phone — the search the rental orders list does not have.

Tap the arrow at the end of any row to expand it. You get the customer's details, the rental period, the financial summary and a tool-by-tool breakdown including conditions out and in, late fees and damage notes. **Open Full Order** jumps to the order itself.

Order Reports

Showing 126 orders

126 orders | 12 items | 74184.030 | 0 items

Search by Customer ID, Order Name, Phone...

Order ID	Item	Customer	Phone	Date	Status	Amount
1	Agri	My company 2 branch, Merich	+9681111111	2024-04-01	Completed	1,175.240

10	Agri	My company 2 branch, Merich	S	2024-04-01	Completed	1,193.880
11	Agri	My company 2 branch, Merich	S	2024-04-01	Completed	1,193.880
12	Agri	My company 2 branch, Merich	S	2024-04-01	Completed	1,193.880
13	Agri	My company 2 branch, Merich	S	2024-04-01	Completed	1,193.880
14	Agri	My company 2 branch, Merich	S	2024-04-01	Completed	1,193.880
15	Agri	My company 2 branch, Merich	S	2024-04-01	Completed	1,193.880
16	Agri	My company 2 branch, Merich	S	2024-04-01	Completed	1,193.880
17	Agri	My company 2 branch, Merich	S	2024-04-01	Completed	1,193.880
18	Agri	My company 2 branch, Merich	S	2024-04-01	Completed	1,193.880
19	Agri	My company 2 branch, Merich	S	2024-04-01	Completed	1,193.880
20	Agri	My company 2 branch, Merich	S	2024-04-01	Completed	1,193.880

The discount audit list.

Step 32 Tax Details

Tap **Tax Details** for the same shape applied to tax: which orders carried tax, how much, and the breakdown per tool.

Both this screen and Discount Details only offer the later statuses in their filter — **Checked Out**, **Checked In**, **Done** and **Invoiced** — because an order that never went out cannot have carried tax or a discount.

The tax audit list.

Step 33 Rental Dashboard

Tap **Rental Dashboard**. The icons at the top right switch between four views of the same orders: a graph, a pivot table, a plain list and a calendar.

The graph view opens first, with revenue, order count, average order, active rentals, late fees and discounts across the top. **Measures** changes what is plotted and **Group By** changes how it is split. The pivot view totals by month and period type. The list view adds a **Download** button. The calendar view shows each day's orders and daily total; tap a day to see them.

What you see	What it shows	What it actually means
Graph view	One measure over time	The fastest way to see whether this month beats last.
Pivot view	Months against period types	Answers whether daily or weekly hires earn more.
List view	Every order as a row	The only view with a download.
Calendar view	Orders by day	Useful for spotting the days you

What you see	What it shows	What it actually means
		are busiest.

The dashboard in its graph view.

PART 10 FINISHING UP AND QUICK REFERENCE

Step 34 Sign Out

Tap the **Logout** tab. The app asks "Are you sure you want to logout?" — tap **OK** to sign out or **Cancel** to stay.

Sign out at the end of your shift. Everything you do is recorded against whoever is signed in, and signing out is also the only way to change branch.

The sign-out confirmation.

What the Status Words Mean

Status	Where the order is	What you can do next
Draft	Being written up	Change anything, confirm it, or cancel it.
Confirmed	Agreed, tools still on the shelf	Check the tools out, or cancel.
Checked Out	Customer has the tools	Check them in, apply a discount or tax, invoice the hire.
Checked In	Tools are back	Rate the customer, mark it done, take payment.
Done	Finished	Invoice it. It can no longer be cancelled.
Invoiced	Invoice raised	Produce the check-in invoice, update the rating.
Cancelled	Abandoned	Nothing. Cancelling is blocked once an order is invoiced.

Things to Remember

- Every message the app shows you looks the same — a grey bar at the bottom of the screen. A failure looks exactly like a success, so read them rather than glancing at them.
- The branch is fixed at sign-in. Changing it means signing out and back in.

- **Remove** buttons on photos, signatures, ID proofs, discounts and rental lines act immediately with no confirmation. Deleting a customer, a banner or an expense does ask. The inconsistency is the trap.
- Unticking the terms box after a customer has signed deletes their signature.
- The tax panel accepts any number, including a negative one and one over 100. Check the total before applying it.
- A failed **Confirm** can leave the screen saying **Confirmed** when the server disagrees. Reopen the order from the list to see the truth.
- The Sales Report counts only checked-in and invoiced orders.
- The rental orders list has no search and loads 200 orders. Use **Order Reports** to find anything older.
- New tools appear a day late, once the server's daily job has run.
- Customer emails must end in **.com**, and business accounts cannot be used as customers.
- Deleting a customer deletes their orders and their invoices too.
- The app needs a live connection. There is no offline mode, and nothing you type is queued for later.

Work the loop in order — confirm, check out, check in, rate, close — and the app stays out of your way. It is the shortcuts around that loop that cost time.

BOOK TWO

For whoever installs the app and decides who sees what.

What Is In This Book

Part	What it covers
Part 1	What has to exist on the server before the app will work
Part 2	Connecting a tablet, and what to do when it will not connect
Part 3	Hiding features from individual people, and which hides actually work
Part 4	The picture banners on the home screen
Part 5	A quick reference of what breaks when something is missing

PART 1 BEFORE YOU START

What Has To Be In Place

The app is a front end. Everything it shows comes from your server, and it will not paper over anything missing there. Get these in place before you pick up a tablet.

What	Where it lives	What happens without it
The device login module	Installed on the server	Device Setup stops with "Device Module Not Installed" and the tablet cannot be connected at all.
The rental module	Installed on the server	Nothing loads.
A user account per person	Server user list	People share accounts, and every order gets stamped with the wrong name.
Branches on each user	The user's allowed companies	With one branch, sign-in skips the branch panel. With several, the panel appears. With the wrong ones, staff see another branch's tools.
Rental permissions on each user	Server user groups	A user in neither rental group gets an error on every list. Ordinary rental users cannot delete orders.

What	Where it lives	What happens without it
Tool categories	Server, pre-loaded	Every tool must have one, and the app cannot create them. Without categories, no tools can be added.
Expense categories	Server, pre-loaded	Every expense must have one. Without them, no expenses can be recorded.
Pricing rules	Server	Only rules flagged as the primary rule appear in the app. Others are invisible, which looks like missing pricing.
Company currency	The company record	Without it, every amount in the app prints with no currency symbol at all.
Decimal precision	The price precision record on the server	Sets how many decimal places money is shown to. Falls back to two.
Order and customer numbering	Server sequences	Without customer numbering, every order shows the same fallback customer code.
The daily product job	Server scheduled job	Tools added in the app never become rentable.
Invoice branding	The invoice settings record	Server-produced invoices fall back to a hard-coded company name and address.
Messaging service	Server	Send WhatsApp fails on every invoice.

IMPORTANT The invoices the app produces on the tablet carry a company name, address, registration number and VAT number written into the app itself, not taken from your invoice settings. If they are wrong for your company, they have to be corrected in the app and a new version installed. The invoice settings record only governs invoices produced by the server.

PART 2 CONNECTING A TABLET

Step 1 Fill In Device Setup

A new tablet opens on **Device Setup**, headed "Configure this device to connect to your server". It is a once-per-tablet job.

Type the **Server URL**, including **http://** or **https://**. Move off the field and the app fetches the list of databases; pick yours from **Database**. Then enter an administrator user name and password under **Admin Credentials** and tap **Configure Device**.

What you see	What to put in it	What it actually means
Server URL	The address staff tablets can reach	Must be the address the tablet can actually reach on your network, not the one that works on the server itself.
Database	Your database	The list only loads once the URL is right, which makes it a useful test of the address.
Admin Credentials	An administrator account	Used to register the tablet. It is stored on the device, so use an account you are willing to leave there.
Configure Device	Tap when the three above are filled	Checks the server, checks the module is installed, then offers to scan the code.

The error under the field tells you which part is wrong: "Cannot reach server — check the IP address and port" means the address or port is wrong, "Connection timed out — is the server running?" means nothing answered, and "Server found but database listing is disabled or module not installed" means you reached a server but not a usable one.

IMPORTANT Opening this screen immediately disconnects whatever registration the tablet already had, without asking. Do not open Device Setup on a working tablet to "have a look" — you will have to register it again.

Device Setup on a new tablet.

Step 2 Scan the Registration Code

After **Configure Device** succeeds you are asked "Ready to scan?" and shown the tablet's model and device ID. On the server, open the device registry and create a new device record, which produces a QR code on screen. Tap **Scan QR** on the tablet and point it at that code.

The tablet says "QR detected — registering device..." and then "Device registered! Redirecting...", and takes you to the sign-in screen.

What goes wrong	What you see	What to do
The code was made for another database	Wrong Database , naming both	Generate a new code from the database chosen on the tablet.
The code has been used already	QR Already Used	Create a new device record. Each code works once only.
The device is blocked	Device Blocked , with a serial number	Unblock it on the server, then generate a fresh code.
The tablet cannot reach the server	Cannot Reach Server	Check both are on the same network and the address uses the network IP.

IMPORTANT Each code registers one tablet once. Unblocking a device does not restore it — you must create a new device record so a fresh code is generated, then scan again.

Step 3 Know How a Tablet Gets Disconnected

While anyone is using the app it checks in with the server every few seconds. If you block or deactivate that tablet on the server, the person using it is signed out within seconds and returned to Device Setup, from whatever screen they were on. Anything unsaved is lost.

That check is deliberately forgiving of a dropped network: if the tablet cannot reach the server it carries on. A blocked tablet that is offline stays usable until it reconnects. Plan on that when you retire a device — block it and confirm it has actually gone back to the setup screen.

If you ever need to get back to Device Setup on a working tablet, tap the "Welcome back" title on the sign-in screen seven times and a gear icon appears at the top right. It is deliberately hard to find so that staff do not wander into it.

PART 3 WHO SEES WHAT

Step 4 Open Apps Privileges

Sign in as an administrator and tap **Apps Privileges** in the **ADMINISTRATION** band. Nobody else can see this tile, and anyone reaching the screen another way is turned away with "Only administrators can access this feature".

Tap **Pick a user**, search, and choose someone. Their features appear grouped, each with a switch.

Step 5 Hide Features For One Person

Flip the switch on anything you want hidden from that person. A bar appears telling you how many unsaved changes you have, and the header shows **Save** with the count. Tap it, and you get "Privileges saved".

Hide All and **Reset All** do the whole list at once, each asking for confirmation first.

What you see	What it does	What it actually means
Pick a user	Chooses whose view you are editing	One person at a time. There is no group or role editing in the app.
A feature switch	Hides that item for that person	Cosmetic only. It stops the tile being drawn; it does not stop the underlying action.
Save with a count	Writes the changes	Nothing is saved until you tap it. Leaving the screen offers to discard.
Hide All / Reset All	Everything at once	Useful for setting up a new starter, then switching back on what they need.

IMPORTANT Changes take effect the next time that person signs in, not immediately. And if the tablet cannot reach the privilege service, every hidden item reappears — hiding is a tidiness tool, never a security control. Use server permissions for anything that actually matters.

IMPORTANT Privileges never apply to an administrator. The app says so itself with a red banner when you pick one. Give the people you want restricted an ordinary account.

Which Privileges Actually Do Something

This is the part worth reading twice. The privilege list offers around forty-five entries. Nineteen of them work. The rest appear in the list, save without complaint, and change nothing at all.

These work	These do nothing
The fifteen home-screen tiles: new rental, rental orders, tools, pricing, tool categories, tool availability, customers, customer ID proofs, customer ratings, sales report, expenses, discount details, tax details, order reports and rental dashboard	Everything to do with orders: confirm, check-out, check-in, mark done, mark paid, generate invoice, export PDF, apply tax, apply discount, rate customer
The App Banners row on the profile screen	Adding, editing or deleting customers
Adding a banner	Creating, editing, submitting, approving, refusing, deleting or paying expenses
Editing a banner	Adding, editing or saving tools, and saving pricing
Deleting a banner	Every report export, and the sales report date filter

So you can take a whole screen away from someone, but you cannot take away a button inside a screen they can reach. If you hide the delete-customer privilege expecting it to stop them deleting customers, it will not. Take the **Customers** tile away instead, or restrict them properly on the server.

PART 4 HOME-SCREEN BANNERS

Step 6 Add or Change a Banner

The banners are the pictures at the top of the home screen. They are decoration — staff cannot tap them — but they are the one part of the app you can brand yourself.

Go to the **Profile** tab and tap **App Banners**. To add one, tap **New Banner**, type a **Name**, leave **Active** on, and tap **Pick from gallery**. The image is cropped to a wide 3:1 shape. Tap **Save**.

To change one, tap it in the list. **Replace image** swaps the picture and **Delete banner** removes it after asking.

What you see	What to put in it	What it actually means
Name	A label for your own reference	Required. Staff never see it.
Active	On to show it	Turn it off rather than deleting, if it is seasonal.
Image (3:1)	A wide image	Required when creating. Crop to 3:1 yourself for a predictable result.
New Banner	Adds one	If the add privilege is hidden for you, this button is gone and there is no other way to create a banner.

The profile screen, where the **App Banners** shortcut lives.

PART 5 QUICK REFERENCE

What Breaks If Something Is Missing

Symptom	Almost always means
Amounts show with no currency symbol	The company record has no currency set.
A new tool never appears	The daily job that turns products into rentable tools has not run.
A tool has no price	Its pricing rule is not flagged as the primary rule, so the app cannot see it.
Every order shows the same customer code	The customer numbering sequence is missing on the server.
Someone gets an error on every list	Their account is in neither rental permission group.
Staff see another branch's tools	The wrong branches are on their user record.
The invoice shows the wrong company	Server invoices need the invoice settings record; tablet invoices carry details written into the app.
Send WhatsApp always fails	The messaging service is not connected on the server.
A hidden tile is visible again	The privilege lookup failed, and hiding fails open by design.
Someone was thrown out to Device Setup	Their tablet was blocked or deactivated on the server.

Things to Remember

- Registration codes work once. Unblocking a device is not enough — create a new device record so a fresh code is generated.
- Opening Device Setup disconnects the tablet immediately, without asking.
- A blocked tablet stays usable while it is offline. Confirm it has actually returned to the setup screen.
- Privilege changes apply at the user's next sign-in.
- Privileges do nothing at all for administrators.
- Only nineteen of the roughly forty-five privileges have any effect, and they are all whole-screen hides.
- Hiding fails open. If the lookup fails, everything reappears. Never rely on it for security.

- The admin user name and password typed into Device Setup stay on the tablet. Use an account you are content to leave on a device that lives on a counter.
- Tool and expense categories are required by the server and cannot be created from the app.
- The app needs a live connection to the server at all times. There is no offline mode.

Set the server up properly first and the tablets take five minutes each. Skip it and you will spend that time on the counter instead, with a customer watching.
